

Perfection in Precision

EASYPAIN

INDUSTRIAL COATINGS

This system is ideal for high turnover manufacturer-owned paint stores or distribution centers, as well as heavy traffic commercial and contract paint centers.

- Easypaint is an automatic, integrated dispensing system, designed for high-volume productivity
- The system is operated via a computer using Maestro® software
- Exact color reproducibility, amazing speed and integrated automatic mixing guarantee fast and reliable performance
- Precise quantities can be accurately dispensed on a gravimetric or volumetric basis
All white bases are stored in conveniently located storage containers
- A custom-designed distribution system transfers the required components to the gravimetric dispensing head
- Once the white base has been dispensed, the container automatically positions itself under the volumetric tinting system, which swiftly and simultaneously dispenses all the coloring agents
- Once the white base has been tinted, the container is automatically sealed and moved along a conveyor belt to the final mixing stage
- If Easypaint is intended for use with both water-based and solvent-based paints, the “Ex” version will be supplied

Perfection in Precision

EASYPAIN

INDUSTRIAL COATINGS

ADVANTAGES

- Stock reduction and rationalization
- Limitless color choice
- Improved color reproducibility
- Improved productivity
- Automatic cleaning of valves
- No need to keep obsolete products
- Space and manpower savings
- Waste reduction
- Improved flexibility
- Enhanced cost and margin control
- Ability to create a database for each customer, thereby increasing profitability
- No sales lost due to unavailability of bases or the right can
- Environmental protection
- Improved security and working conditions

TECHNICAL DATA

Components

In case of DN35 (up to 8) or DN14 (up to 18)

Dispensing Accuracy

1gr (up to 0.1gr accuracy)

Dispensing Time

2 min for a 2.5kg formula
