

Perfection in Precision

CAMPIONE

LABORATORY UNITS

This system automatically produces small batch quantities with a high degree of accuracy (0.01 gr) and reproducibility.

- The system manages up to 96 multi-flow valves mounted on a metallic arm, pneumatically controlled from an electrical cabinet
- A pneumatic cylinder moves the arm to the centre of the dispensing head, where the different valve openings are controlled by a central actuator
- The system is normally combined with a larger production dispensing system, and the two systems share the same components to ensure consistent and perfect reproducibility
- The system can also be installed as a standalone system having its own pumping structure whenever highly accurate small batch production is required
- A wet washing cycle starts automatically at the end of each production and blow-drying follows to dry the nozzle of the valve
- The size of the dispensing head and the number of valves can be adapted to the customer requirements and the system can dispense into all type of cans

Perfection in Precision

CAMPIONE

LABORATORY UNITS

ADVANTAGES

- Stock reduction and rationalization
- Improved color reproducibility
- Improved productivity
- Space and manpower savings
- Environmental protection
- Improved security and working conditions
- Waste reduction
- Improved flexibility
- Machine downtime reduction

TECHNICAL DATA

Components

Up to 96 components

Dispensing Accuracy

0,01 gr

Containers

Valve diameter: DN06

Dispensing Time

4 min for a 2,5 kg formula using 4 components
