

Perfection in Precision

SK450

PAINT SHAKER

SK450 is the ideal paint mixing/shaking machine for small producers and dealers.

- Up to 35kg
- Variable speed (programmable)
- Automatic adjustment to grid
- Automatic can detection
- High/low clamping system

The system can handle containers up to 35kg, including oval and square shaped products.

The timer can be customized to your specific need by using the electronic display or by using the optional ShakeTimeManager© pc software. It allows you to easily set a shake program (including variable speeds) on 1, 2 or all 3 of the available timers.

Another feature of the SK450 is its built-in grid adjustment: the shaker will automatically adjust to the local power supply, so no more need to order equipment specifically for the various regions.

The SK450 with its enhanced features is the ideal shaker for locations with a medium to high paint turnover.

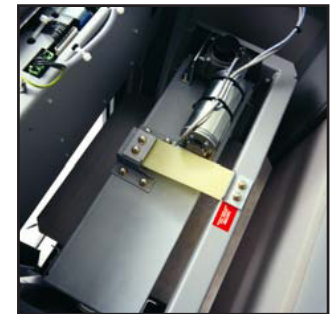

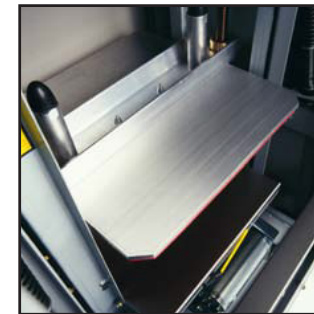

SK450

PAINT SHAKER

FEATURES

High/low clamping	Yes
Service & diagnostic software	On board
Pre-loaded customized software settings	Optional
