

DISPENSING SYSTEM WITH INTEGRATED SOLVENT RECOVERY

WASHING SOLVENT RECYCLING SYSTEM

Over the years Inkmaker automatic dispensing system helped thousands of satisfied customers world-wide.

Our no-nonsense dispensing solutions helped our customers to achieve amazing results, with dramatic improvements in terms of efficiency, speed, reliability and economy.

Now, more than ever before, the need to further boost productivity and minimize wastage, combined with an increased attention towards our planet's resources, has moved us to create an even better solution: a marriage made in heaven between two technologies that by themselves, have already proven their worth.

Now, all Inkmaker dispensing solutions can be combined with their very own "Solvent Recovery System", which will serve two main purposes:

- Actively recycle, over and over again, the solvent used for the day to day washing of the dispensing valves, thus making sure that no solvent is ever wasted.
- Recycle all used and dirty solvents from different production processes, thus making Inkmaker dispensing solutions an even more economically sound investment.

DISPENSING SYSTEM WITH INTEGRATED SOLVENT RECOVERY

WASHING SOLVENT RECYCLING SYSTEM

Connection to any brand of spectrophotometer
With the use of a spectrophotometer, the accuracy of the required colour will be even higher.

Computer integrated manufacturing
Management and production need not be separate; you can monitor and organize your production directly from your office!

Increase environmental protection
Our dispensing systems can eliminate or reduce to a minimum any waste flowing into the environment. And now that the level of environmental protection consciousness has finally increased, with the combination of our solvent recovery, we can further help you minimize your environmental footprint!

Traceability according to ISO rules
Our software can generate reports as per ISO standards and you can trace any production record whenever there is the need to do so.

Eliminate waste
With our combined solutions the volume of waste generated will be nil or minimal. All left over batches will be recycled into future productions and with our solvent recovery, no more solvent will go to waste!

Increase safety
Our systems can run automatically, errors can be avoided and the possibility of accidents is drastically reduced.

Keep control of costs
To help the environment is to help yourself too! All of the above will lead to huge savings which can be channelled into other, more profitable projects.

Save manpower
Our solutions require only few people thus minimizing human errors.

Flexibility on colours demand
With our unique system, all the colours you need are available all the time.

Rationalize stock
From now on all you need to keep in stock are the base colours.

Save space in the factory
With space saving, production cost is lower and saved space can be used more profitably.

Capability to offer just in time service to customer
Whichever formula you need is produced within minutes.

Higher consistency and reproducibility
Accurate and consistent products, all products will be of the same colour without variations.

TECHNICAL DATA

Dimensions (WxDxH)	950 x 650 x 1200 mm	Containers	45 / 60 ltr
Weight	100 / 115 kg	Operating Temperature	50 - 190 °C
